

- 1.0) Our present production and inspection procedures have assured the high quality of our products for more than forty-seven years. This series of "SQC" bulletins are intended to formalize those procedures to agree with current industrial practices. These bulletins simplify the modifications of those procedures to accept new techniques and controls.
- 2.0) This series of bulletins will serve as substantiation of our desire to produce the quality products that our customers require. It also will provide to those customers a reference from which the customer makes specific requests to control our production and quality control procedures. This helps us in meeting specific requirements involving our products.
- 3.0) An index of the effective bulletins is provided as number SQC-000.00. (Since this index must be changed often, it will be the only exception to the provision of paragraph 3.0 above.)
